Accuracy and interpretation

Astronomy Engine apparent geocentric ecliptic longitudes; same J2000-anchored Lahiri-style approximation as natal Kundli; mean nodes (always retrograde, no node stations); two-day bracketing and one-second numerical event refinement. Dasha year = 365.25 days. Dates are UTC; boundary precision is numerical, not a promise of astrological accuracy. Whole-sign Jupiter aspects 5/7/9 and Saturn 3/7/10. Annual scores are duration-weighted traditional heuristics with every additive factor listed. Yoga indicators use explicitly simplified association rules, not a complete classical yoga assessment.

Astrology describes tendencies, not certainties. These traditional scores are transparent heuristics, not measured probabilities. For spiritual reflection only; not a substitute for professional medical, legal or financial advice.

Calculation and accuracy

Astronomy Engine apparent geocentric ecliptic longitudes; same J2000-anchored Lahiri-style approximation as natal Kundli; mean nodes (always retrograde, no node stations); two-day bracketing and one-second numerical event refinement. Dasha year = 365.25 days. Dates are UTC; boundary precision is numerical, not a promise of astrological accuracy. Whole-sign Jupiter aspects 5/7/9 and Saturn 3/7/10. Annual scores are duration-weighted traditional heuristics with every additive factor listed. Yoga indicators use explicitly simplified association rules, not a complete classical yoga assessment.

Astrology describes tendencies, not certainties. These traditional scores are transparent heuristics, not measured probabilities. For spiritual reflection only; not a substitute for professional medical, legal or financial advice.
